

MODEL PDQ/BCT/BCS

PDQ-FASTPAC CHARGER/TABLE/SHIELD

Christie now offers a complete charging system for backroom battery service areas. The system includes the "PDQ" Charger, a new acid-proof all-plastic charging table, and a new poly-vinyl charging shield mounted atop the table.

Now the "PDQ" can be used in backroom areas to support over-the-counter battery sales. When limited space and high speed are essential factors, this is a safe and clean alternative.

"PDQ" SERVICE EXPRESS BATTERY CHARGER

The "PDQ" can return an average auto battery to service in 20 to 40 minutes. Christie's patented diagnostics assure safe and effective charging without concern for overcharging. Computer controls minimize charging time and maximize customer service to get your customer back on the road in record time.

BCT 40 BATTERY CHARGING TABLE

Christie's new charging table is high density poly plastic for acid proof durability and flexibility. The table has a top shelf liner to keep batteries up and out of any acid spills. Dimensions: 37" H x 40" W x 18" D.

BCS 40 CHARGING SHIELD

The Charging Shield is made of a tough poly-vinyl plastic for maximum safety and minimum maintenance. The shield can be raised for battery loading and connections and lowered to provide complete protection.

The shield conveniently mounts in the top slot of the BCT charging table. Its rugged construction and simple operation complement the sophistication of the PDQ's charging technology.
